Confident developer with over 1 year of experience, I enjoy writing clean maintainable code following best practices and standards. Since coding is a passion of mine, I will be taking the initiative when it comes to my work. I believe stepping up then doing what needs to be done will also maintain a good work balance which only boosts team efficiency. I'm a friendly, proactive individual who approaches life with an open mindset, I like tackling problems and I pride myself as somebody who you can rely on. I will always be playing my part within the team even if that's simply communicating well among us.

Skills Summary - Key : beginner, intermediate, advanced

| Development | Processes | Frameworks |
|--|--------------------------|------------|
| HTML , CSS & SCSS | Agile Development | Bootstrap |
| ES6 JavaScript - learning | Continuous Integration | Foundation |
| PHP , SQL , WordPress , NPM , GIT , | Coding standards | SASS |
| Jest Unit testing - started learning | Mobile first development | |

Mobile-first, responsive design, flexbox / grid, BEM, semantic HTML, Web pack, Parcel, Gulp

Experience

Junior Front End Developer - Freelanced

November 2020 – Current

Tech Stack: HTML, SCSS, JAVASCRIPT

I started Front End Development, with the focus of building projects from initial design through to completion and continuous integration to keep pages updated. My main responsibility was to work with outdated pages to transform UX wireframes and designs into components and plugins which are optimised for all browsers, using HTML, SCSS & Vanilla JavaScript.

To manage and overview my works I used Git, Bitbucket for managing code and used Trello for tracking and planning sprints adhering agile and Scrum methodologies. As I progressed and gained more live experience, I started looking to expand my knowledge, working on fine-tuning my JS skillset and building towards becoming a React.JS / Framework Dev and this is where I am now.

Landing Pages & Components (personal projects)

Current

Tech Stack: Javascript, SCSS, HTML and CSS

Personal projects built using Vanilla JavaScript, BEM naming conventions. I also learnt to use UI, UX software such as Figma and Adobe XD

Qualifications

JavaScript To React - Learning Advanced Javascript, To Progress Into A Framework.

Current

BTEC National Diploma (Extended Business) - Harlow College - D*D*D*

2018
